

Regnbogaspil fyrir 2-4

Það sem þarf:

- Stærri teningar, ég keypti þessa . <https://abcskolavorur.is/products/teningur-med-staerdf-formunum-15-x-15-cm> Spjöldin sem eru fest á teninginn eru 7,5 x 7,5 cm. Þannig að teningurinn verður að vera a.m.k. það að stærð. Ef teningurinn er ekki í regnbogalitunum er hægt að lita spjöldin í þeim litum.
- Franskur rennilás (báðar hliðar) til að líma á litateninginn og aftan á stóru spjöldin
- Skæri
- Plast og plöstunarávél
- Litaprentari
- Box til að geyma spjöldin í. Líka hægt að geyma í pokum og setja þá teygju eða stóra bréfastöngu utan um spjöldin til að spara tíma í flokkun áður en spilað er.

1. Regnbogaspjöldin eru prentuð út í fjórum eintökum og plöstuð
2. Stóru spjöldin eru prentuð út í einu eintaki og lituð í regnbogalitunum ef þarf
3. Minni spjöldin eru prentuð út í fjórum eintökum
4. Franskur rennilás er settur í miðjuna á hverri hlið á litateningnum og þegar búið er að klippa, plasta og klippa stóru spjöldin er setur bútur af frönskum rennilás aftan á þau og þau fest á teninginn. Með þessu móti er hægt að skipta út spjöldum á teningnum og spila fleiri og fjölbreyttari spil með einum og sama teningnum.

Það eru nokkrar tegundir af spilum hér á næstu síðum og hægt að prenta eitt spil eða öll eftir því hvað hentar. Hver spilari er með eitt regnbogaspjald og eitt eintak af minni spjöldunum. Hver er með sex útgáfur af minni spjöldunum eftir því hvaða stóru spjöld eru notuð. Eitt stórt spjald með mynd er límt á hverja hlið tenings. Spilið gengur síðan út á það að kasta teningnum, finna hvaða litla spjald passar við og það er svo sett í viðeigandi reit á regnbogaspjaldinu. Sá vinnur sem fyrst fyllir sitt spjald af rímorðum. Ef spilari er t.d. búinn að fylla sex reiti af einum lit gerir sá næsti. Líka hægt að leyfa að kasta einu sinni enn ef spilið dregst á langinn.
