

Þessi leikur gengur út á það að raða ferningum þannig að útkoman verði alltaf 10. Líka hægt að byrja með að finna lægri útkomu og jafnvel seinna má bæta við 10 og finna möguleikana á hærri útkomu. Það þarf að prenta út a.m.k. tvö eintök af lægri tölunum en ég hef hvern fjölda á einni blaðsíðu. Ég er bæði með þetta í svarthvítu og lit eftir því hvort þið veljið að prenta út á hvítt karton eða litað karton.

Prentið út, klippið, plastið og klippið aftur. Prentari á yfirleitt að þola þykkt upp á 160 og jafnvel 180 og þá er best að setja eitt karton í einu í prentarann og prenta eina blaðsíðu í einu.
